

UNSTABLE POWER SUPPLY

HAZARD 10

MECHANICAL TECH

Complexity Simple

Stealth DC 32 Engineering Lore to identify that the power supply has become unstable

Description The destroyed robot's power supply sparks and hums with energy.

Disable (master) Crafting DC 35 to vent the pent up energy in a relatively harmless 5-foot-wide column of fire rising into the heavens above.

Jostled  **Trigger** A creature physically interacts with the robot's remains; **Effect** The power supply potentially detonates. Roll d%. On a result of 1-10, the power supply detonates in a 30-foot radius, dealing 2d12+13 bludgeoning damage and 2d12+13 fire damage (DC 29 basic Reflex save), destroying the robot's remains and the hazard. On a result of 11-100, the power supply does not detonate, but the chance of detonation on further physical interactions increases by 10, cumulatively (1-10 on first interaction, 1-20 on second interaction, etc.), and the hazard resets.

Failed Explosion  **Trigger** A creature fails to disable the hazard by 5 or more; **Effect** The power supply detonates in a 30-foot radius, dealing 2d12+13 bludgeoning damage and 2d12+13 fire damage (DC 29 basic Reflex save), destroying the robot's remains and the hazard.
